

LIBERATING TECHNOLOGY

Secure Your Business: Keep Your Data Safe

Symantec EndPoint Protection - Simple, fast and effective virus and malware protection. Symantec EndPoint Protection (Small Business Edition) is as simple as it is fast and effective, stopping viruses and malware in their tracks without disrupting productivity

Don't Compromise Your Business Security - According to the latest Symantec Internet Security Threat Report, 60% of targeted attacks hit small and mid-sized organisations. You need a way to keep your data safe from attacks and data breaches.

How Does EndPoint Protection Help?

Symantec EndPoint Protection Small Business Edition analyses downloaded files and applications, and lets your employees know which ones can be trusted or should be avoided to eliminate potential threats.

Proven Protection

- Automatic security updates for always-on protection
- Intelligent scanning means fewer, faster scans
- Easily protect remote computers

Fast & Easy Deployment:

- No additional hardware needed
- No special IT staff or training needed
- Fast protection of laptops, desktops and servers
- Set up company-wide in minutes

Grows With Your Business

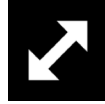

- Web-based management makes common tasks quick and easy
- Simple subscription fee covers either cloud or on-prem management options

Security that gives your business peace of mind

Network Threat Protection

Analyses incoming data and blocks threats while they travel through the network before hitting endpoints.

Insight

Insight™ correlates tens of billions of linkages between users, files, and websites to detect rapidly mutating threats.

Power Eraser

Power Eraser scans infected endpoints to locate advanced persistent threats and remove tenacious malware.

Sonar

SONAR™ leverages artificial intelligence to provide zero-day protection.

Application Control

Control file and registry access and how processes are allowed to run.

External Media Control

Restrict access to select hardware and control what types of devices can upload or download information.

EndPoint Protection includes:

- **Network Threat Protection:** Network threat protection technology analyses incoming data and blocks threats while they travel through the network before hitting endpoints.
- **Anti-virus Heuristics:** Signature-based antivirus and advanced file heuristics look for and eradicate malware on a system to protect against viruses, worms, Trojans, spyware, bots, adware, and rootkits.
- **Reputation:** Insight™ correlates tens of billions of linkages between users, files, and websites to detect rapidly mutating threats.
- **Behaviour:** SONAR™ leverages artificial intelligence to provide zero-day protection.
- **Repair:** Power Eraser scans infected endpoints to locate advanced persistent threats and remove tenacious malware.

Cobweb offers consulting to help you discover and apply the unique value Symantec can add to your business.

Work with us to get better, faster, more secure protection with Symantec EndPoint Protection using the following features:

- **Application Control** - Control file and registry access and how processes are allowed to run.
- **External Media Control** - Restrict access to select hardware and control what types of devices can upload or download information.
- **Hosting Integrity Checking & Policy Enforcement** - Endpoints are protected and compliant by enforcing policies, detecting unauthorised changes, and conducting damage assessments with the ability to isolate a managed system that does not meet your requirements.
